Recommendations on ultrasonic cleaning

How does ultrasound work?

Vibrations at frequencies exceeding 18 kHz (18,000 vibrations per second) are called ultrasound. As a result of these vibrations millions of smallest vacuum bubbles are formed in liquids. They implode during the high pressure phase and create highly effective pressure waves. This process is called cavitation and causes the removal of dirt particles from the objects to be cleaned.
Lower frequencies of approx. 20 kHz which are applicable in cell disruption, produce bubbles with larger diameters and stronger pressure waves than higher frequencies of approx. 35 kHz which are used for intense but gentle cleaning.
The HF generator converts the mains frequency into the corresponding frequency of the ultrasonic bath.
This frequency is transformed into mechanical vibrations by transducers underneath the tank.
Ultrasound is transmitted to the liquid in the bath.
All ultrasonic baths (except DK-units) use **SweepTec®** – a special frequency modulation around on optimally fixed operating point. A very homogeneous and even ultrasonic field is achieved.

Advantages of ultrasonic cleaning

Ultrasonic cavitation removes dirt rapidly from items, thoroughly and deep from pores, even from difficult to reach places such as cavities or holes.
Ultrasound cleans only in a few minutes and exceeds in its efficiency other cleaning methods.
Ultrasonic cleaning is also gentle because even slight damage like scratches are eliminated.

Advantages in process engineering and sonochemistry

Cavitation not only can be used for various purposes, but a very fine emulsion of oil and water can be produced by ultrasonic application. Compared to other manufacturing processes this emulsion is more stable.
For sonochemical processes in an ultrasonic bath, the reaction vessel should have a thin bottom. Thus, the ultrasonic energy is radiated directly and effectively into the reaction vessel.

How to select the proper unit

SONOREX ultrasonic baths work with the intense cleaning frequency of 35 kHz.
Size and number of objects to be cleaned determine size of the ultrasonic bath.
When selecting the unit, dimensions of the accessories, e. g. baskets have to be considered. To avoid overloading, it is recommended to choose a slightly larger unit.
This also allows additional applications at a later stage.

Should an ultrasonic unit have a heating?

Warm cleaning solutions reduce the cleaning time; dirt is removed faster. Units with heaters are the preferred choice for cleaning processes in laboratories.
Disinfectant solutions must not be warmed-up because protein coagulation starts at a temperature of 40 °C (104° F) and this poses an obstacle for some cleaning and all disinfection processes. Therefore, units without heaters are recommended for these applications.

What kind of accessories should be used?

Objects to be cleaned and reaction vessels must not be placed on the tank bottom.
Insert baskets avoid scratching either the parts to be cleaned or the tank bottom. Beakers are placed into positioning lids and are used for cleaning of small objects or when working with aggressive solutions.

Which cleaning agents are appropriate?

TICKOPUR and STAMMOPUR cleaning and disinfectant agents have been especially developed for application in SONOREX ultrasonic baths. Water without any cleaning agent does not clean.
Household detergents as well as DI-water should never be used. It is necessary to use plastic insert tubs, when working with acids or removing acid residues.
Flammable liquids must not be used directly in the ultrasonic tank.

SONOREX DIGITEC

Digital high-power ultrasonic baths with fast degassing

- Cleaning of technical glassware like burettes, pipettes, petri dishes and laboratory flasks
- disinfection and cleaning at the same time
- Degassing of beer samples for analysis of alcohol contents, original worth, colour, pH value
- Degassing of food samples from cans for analysis of stannous contents
- Extraction of quaternary ammonium compounds (QAC) of wood
- Extraction of herbs samples for determination of aflatoxines (causing mold decay on food)
- Extraction of soil samples for determination of hydrocarbons
- Test method for freeze-thaw resistance of concrete: CDF test – through sonication, loosely adhering scaled particles are removed from surface

WINSONIC® DT remote control

- The PC program is designed for operating systems MICROSOFT® WINDOWS®2000 and MICROSOFT® WINDOWS® XP in connection with the infrared adapter IR 1 allowing a comfortable operation and monitoring of DIGITEC DT ... RC ultrasonic baths.
- The status window gives an updated overview on the working conditions.
- Start time and stop time as well as the respective bath temperature are automatically collected in log files. This way, a documentation of the cleaning process is possible for quality assurance.

WINSONIC® DT remote control consisting of:
software and infrared adapter IR 1 Code No. 3090

Interface for automation of laboratories

- RS 232 data interface to the laboratory PC allows processing of individual control tasks and integration into an automated laboratory line.
- Data log is disclosed and described in a detailed information for use.
- Infrared adapter IR 1 is necessary for connection.

Special accessories

K 10 with 2 EK 100

Spring clamps for laboratory flasks

Neither floating nor canting of flasks. Fast and easy fixing to the bottom of insert baskets or utensil holders, with mesh sizes up to 12.5 x 12.5 mm.

EK 10, for 10-ml-Laboratory flask
EK 25, for 25-ml-Laboratory flask
EK 50, for 50-ml-Laboratory flask
EK 100, for 100-ml-Laboratory flask
EK 250, for 250-ml-Laboratory flask

Suitable for baskets K 3 C/CL, K 5 C, K 6, K 10/B, K 14/B, K 28/C, utensil holders GH 5, GH 10/B, GH 14/B, GH 28, and flask holders GL 100 F, 510 F and shaking device SA 1028

GV 10

Handle adjustment for insert baskets and utensil holders registered pattern DE 200 017 14

Stepless adjustment of immersion depth, no floating, tipping over or flooding of labortatory flasks. Quick and easy to attach.

GV 3 - 2 pieces
suitable for baskets K 1 C, K 3 C/CL, K 5 C, K 6 L, K 6 BL and utensil holder GH 5
GV 10 - 2 pieces
suitable for baskets K 10/B, K 14/B, K 28/C and utensil holders GH 10/B, GH 14/B, GH 28

Pipette cleaning

Short cleaning time. No time-consuming washing. Rinsing process in the same vessel using the siphon principle - no shifting around. Accelerated circulation of pipettes. No glass breakage when used according to the operating instructions. Also suitable for burettes, other glassware and plastic pipettes. Max. length of objects to be cleaned: 765 mm.

SONOREX PR 140 C
Operating capacity 13.9 l, operating depth 765 mm, height of the device 1,130 mm,
please note that 800 mm free space above the cylindrical vessel is necessary for loading,
required floor space 335 × 255 mm, ultrasonic peak output 860 W, HF output 215 W_{eff}, 35 kHz,
radiating surface diameter 150 mm, timer 1 to 15 min or continuous,
mains connection 230 V~, 50/60 Hz, on request 115 V~.
Quantity of pipettes to be cleaned - suitable for K 140 B:

- diameter 9,0 mm – ca. 90 pieces
- diameter 10,7 mm – ca. 55 pieces
- diameter 14,0 mm – ca. 35 pieces

Why do you need special agents for ultrasonic cleaning?

Water and ultrasound without any additives do not clean!

Besides ultrasonic power, temperature and relevant processing time, specially balanced cleaning agents are also necessary to achieve optimum cleaning results. With TICKOPUR cleaning concentrates, BANDELIN offers a wide range of adequate cleaning agents.
All of the TICKOPUR cleaning agents were specially developed for ultrasonic applications. With their cavitation-aiding properties, the cleaning concentrates support the cleaning process and are gentle to the material at the same time. Depending on the cleaning tasks, either alkaline, neutral or acidic cleaning agents are recommended. They are biologically degradable and easy to dispose of. Rinsing after cleaning is necessary to remove remaining residues of cleaning agents and diluted soil particles from the parts to be cleaned.

It is not allowed to use combustible liquids directly in the ultrasonic bath.

Household cleaners, acids and most of the customary acid cleaners are improper cleaning agents because they could destroy the tank by pitting corrosion resulting finally in breakdown of the ultrasonic bath.

Optimum cleaning results with ultrasound require appropiate cleaning agents.

The new generation: Ultrasonic bath SONOREX DIGITEC DT 1028 F combined with shaking device SA 1028

Ultrasonic bath DT 1028 F + shaking device SA 1028 = SONOSHAKE

Code No. 3257

SONOSHAKE offers a wide range of possible applications for sample preparation in many areas of analysis, for example, in environmental and foodstuffs analytics as well as in the area of medical diagnostics.
The bath has a basic area of 500 mm x 300 mm and a tank depth of only 65 mm, making it ideal for sonication of samples in laboratory flasks.
The samples can be sonicated either for a selected period or in continuous mode. Quick degassing using the DEGAS function is also possible.
With four different shaking frequencies, the shaking device enables gentle to vigorous reciprocating motion up to a maximum of 20 mm. Both procedures can be carried out simultaneously or separately. This means that, for example, a sample can be pre-homogenized at a specified shaking frequency, and then final homogenization can be achieved in a very short time using ultrasound.

Shaking device SA 1028

- analogue setting of time (1 – 15 min or continuous) and shaking frequency
- reciprocating motion: settings in 4 steps possible of up to 200 rpm
- constant amplitude of 20 mm independently of loading
- rack easy to remove
- easy mounting of the laboratory clamps EK 10 –250 (ordering separately)
- shaking platform approx. 410 x 280 mm (l × w)
- mounting of 36 × 10-ml-flasks or 36 × 25-ml-flasks or 18 × 50-ml-flasks or 12 × 100-ml-flasks or 10 × 250-ml-Kolben
- required floor space of SONOSHAKE approx. 850 x 360 mm (l × w)

The shaking device SA 1028 can also be added to existing SONOREX DIGITEC DT 1028 F ultrasonic baths.
Code No. 3249

SA 1028

Ultrasonic special device for gentle removing of biofilm

Fast microbiological diagnostic method for implant-associated infections

The successful treatment of implant infections depends on an accurate microbiological diagnosis. Microorganisms form biofilms on implant surfaces, what makes them difficult to detect by conventional methods.
BactoSonic® gently removes biofilms from implant surfaces.
After sonication the liquid is cultered on agar plates and can be used for further analysis (e.g. microcalorimetry).
Fast diagnosis of infections is possible.

Principle of BactoSonic®

The implants are placed in the air-tight implant boxes and sonicated in the specially designed ultrasonic device BactoSonic®. Compared to other ultrasonic baths, BactoSonic® works with a very low ultrasound intensity. The biofilm is removed without killing the bacteria, a quantitative assessment is possible.

Assessment of biofilm-forming bacteria on implants by BactoSonic®

The sonicated liquid is cultured and the quantity of bacteria can be determined. Compared to standard methods (e. g. biopsies from periprosthetic tissue) up to 10,000 times more bacteria can be detected. Mixed infections and different bacteria morphotypes can better be identified. The sensitivity especially of patients with previous antibiotic therapy is improved.

Ultrasonic device with cooling for use in pathology and analysis laboratories

Decalcification of bone tissue in pathology

Decalcifying of bone tissue is an important step of histological preparation of samples (e.g. in oncology). Only decalcified samples can be used artefact-free for followed diagnosis. Compared to standard methods, the processing time is extremely shortened.

- no destroying of the morphologic structure of samples
- quantity of aggressive decalcifying liquids is reduced
- faster results of diagnosis

Use in analysys laboratories

With SONOCOOL® the cathalytic effect of ultrasound can also be used when sonicating temperature-sensitive samples.
Exotherm reactions are possible because of the integrated cooling system, processes are faster and more effective.

SONOPULS Features

AMPLICHRON®-system
guarantees a constant amplitude independently from changing conditions within the sample. It ensures reproducible results for process validation. Settings within a range of 10 to 100 % are possible. Verification of actual value at the display. Permanent control of ultrasound irradiation as well as indication of wear of the probe.

Pulsation
limits temperature increase when processing heat-sensitive samples. The adjustable pulsation allows cooling during rest intervals.

Continuous operation
Constant sound radiation – extremely effective.

Built-in timer
Process duration storable. Indication of elapsed time in continuous operation or of remaining time in countdown mode.

Switching ON / OFF - easy to handle
either at the generator or directly at the ultrasonic converter via button or remote control.

Accessories
A wide range of probes and special accessories for a vast variety of applications.

Foil keypad
easy to clean and user-friendly.

ROHS compliant
Devices are built lead free.

How to select the proper unit

Power output in watt is not the sole criterion for selecting an ultrasonic homogenizer. This value only indicates the power of the HF-generator but not the energy delivered to the sample. The amplitude at the radiating surface of the probe is the determining factor for the evaluation of the irradiation result while taking into consideration the volume of the sample.

HF generator:
Transforming of low-frequency voltage of 50 Hz into high-frequency voltage of 20 kHz.

Ultrasonic converter:
Transforming of electrical energy delivered from the generator into mechanical vibrations of 20 kHz.

Standard and booster horns:
Increasing of amplitude by their specially designed shape.
The external thread is made for close connection of vessels.

Probes:
Transmitting of ultrasonic energy into the sample.
Microtips, tapered and flat tips, dia. 2, 3, 6, 13, 19 and 25 mm, for use in different volumes.

SONOPULS Ultrasonic homogenizers

SONOPULS mini20

for volumes up to 25 ml

Fast hand operation

Ready-to-operate for volumes from 0.5 ml to 25 ml, consisting of:
HF generator mini20,
ultrasonic converter mini20 and
microtip MS 2.5, diameter 2.5 mm.
Max. 12 W_{eff} HF output.

Code No. 3665

Fast manual use – ideal for smallest volumes. Pulsation on pressing the bottom at the ultrasonic converter by thumb.

SONOPULS Applications

Ultrasonic homogenizers are used in laboratories, hospitals and in industry for scientific experiments and analysis as well as in pilot or small lot production. Here are some examples showing the vast variety of applications for ultrasonic homogenizers:

Typical areas of application

- Disruption of cells, bacteria, virus, tissue, also mixed tissue
  e. g. for extraction of cell contents
- Emulsifying of hardly mixable liquids, e.g. oil and water, particle size in µm range
- Deagglomeration of nanoparticles in material research (nanostructurized material) in medicine, biotechnology, automobile industry
- Acceleration of chemical reactions
- Production of dispersions

Analysis

- Preparing samples for grain size determination or environmental analysis:
  HD 3200 or **HD 2200** with tapered tip **KE 76** or with extended probe **VS 70 T**.
- Homogenizing of cheese samples for determination of nitrates:
  HD 3200 or **HD 2200** with **MS 73**

Biochemistry - Biology - Medicine

- Sonication of small high-quality samples for analysis like EIA or RIA:
  HD 3100 and HD 2070 with microtip **MS 72** or **MS 73**.
- Due to high amplitudes, disruption of high-resistant bacteria, cells or tissues is possible. Indirect processing of sample in cup booster **BR 30** or in cup horns **BB 2 G** or **BB 6** is recommended to avoid cross-contamination.
- Detection of prions by cyclic amplification of protein misfolding:
  HD 2070 with **MS 73**
- Simultaneous sonication of 12 samples in microplates:
  HD 3100 with MR 12-2

Chemistry and Sonochemistry

- Acceleration of chemical reactions or destroying of highly-molecular compounds:
  HD 3200 or **HD 2200** with tapered tip **KE 76** and sleeve adapters
  NA 29 G or **NA 45 G** for tight fitting to a sonochemical reaction vessel.

Pharmacy - Cosmetic

- Production of larger volumes of long lasting emulsions, e. g. lotions and production of antigens, vaccines or liposomes:
  HD 3200 or **HD 2200** with flow-through cell **DG 4 G**

For special customer requests: BANDELIN will supply booster horns and probes for special applications.

Waste water samples
Aim: Homogenizing for determination of harmful substances, e.g. mineral oil, grease AOX in industrial and butcher's waste water
Quantity: 250 ml
Approx.time: 5 - 10 min
Unit: HD 2200/3200 with TT 13, or taller vessels with VS 70 T

Aluminium oxide suspensions
Aim: Dispersing
Quantity: 100 ml
Approx.time: ca. 4 min

Probes

made of titanium alloy (Ti-Al6-V4) transmit mechanical longitudinal waves into the sample. They are thermo-resistant, can be treated in autoclaves and are resistant to corrosive media. Sample volume, diameter of the processing vessel and the required amplitude determine the selection of the unit and the type of probe.
The higher the amplitude, the more intense the sonication.

Please note that probes are subject to wear and tear.
It is advisable to order spare probes with the homogenizer.

Microtube holder EH 6
For use in BB 6. Up to 6 samples can be treated simultaneously. Pressure plate holds tubes in place. No floating of cups. A mixing of samples is excluded due to markings at the holder.

Cup horn BB 6
for indirect intense sonication. The cup horn is equipped with inlet and outlet for circulation of cooling liquid. Also useable for direct sonication.

Cup horn BB 2 G
plastics, for indirect sonication of pathogenic material.

Microtube holder EH 3
for use with BR 30. Up to 3 samples can be treated simultaneously. 2 exchangable discs with hole diameters 8,5 or 11,5 mm.

Inset basket BK 30
For intensive cleaning of small parts, e. g. cleaning of radioactively contaminated seeds in BR 30.

Cup booster BR 30
For high-intensive irradiation of smallest and sensitive sample volumes, e. g. radioactive seeds or bacteria as well as for flow-through sonication of liquids like cell suspensions. During indirect processing of samples the ultrasound will be transferred by the contact liquid. The sonication will be carried out in reaction vessels or in the inset beaker BK 30. The cup booster is equipped with inlet, outlet and overflow. Either cooling orflow-through processing are possible.

Sound proof boxes

reduce the noise level considerably. Precut holes at the backside allow connections for gas supply and flow-through processing. Acrylic door permits process monitoring.

LS 4 Plastic coated walls, 10 dB-AU damping.

LS 8 made of stainless steel, with damping material. 20 dB-AU damping.
The damping material is water resistant – easy cleaning.
With rod, swivelling clamp and clamp for height adjustment of sample vessels.
Clamping belt for safe fixing of sample vessels with different sizes. Also applicable for sonication of samples in glass vessels with round bottoms or with inlets from below.
Special support UG 6 is available for inverted position of the box during indirect sonication with cup horn BB 6 or cup booster BR 30. Ultrasonic converter is fixed safely through a special clamp.

LS 8 with UG 6

LS 11 made of stainless steel with damping material, 20 dB-AU damping. The damping material is water resistant, easy cleaning. **Distance tube** for direct processing with long probes

AH 6: for MS 72/73, KE 76, VS 70 with TT 13, VS 200 mit TT 25 / VS 200 T, VS 70 T, GS ...

WINPULS® remote control

For process control with PC for operation systems MICROSOFT® WINDOWS® 2000 and MICROSOFT® WINDOWS® XP.
With different additional functions like test logging and comfortable data storage (up to 99 storages).
Set composed of WINPULS® software and infrared adapter IR 1 for interface RS 232

Type	WINPULS® software with infrared adapter IR 1
for HD	3100 / 3200 / 3400
Code No.	3625

TS 8

Foot switch remote control

for easy switching ON/OFF of the HF generator.
With 3 m cable.

Type	TS 8
for HD	2070 / 2200 3100 / 3200 / 3400
Code No.	531

TM 100

Temperature sensor

for measuring the sample temperature from 0 up to 120 °C.
Sensor diameter: 4 mm

Type	TM 100
for HD	3100 / 3200 / 3400
Code No.	3622

SONOREX TECHNIK in laboratories and pilot plant stations

Wirbelreaktor VORTEX®

- Intensifying of industrial, biotechnological and chemical processes
- Degassing
- Disrupting of bacteria
- Disinfection of liquids
- Producing of finest polishing pastes for wafer industry
- Homogenizing

Vortex reactor
consisting of:
Vortex reactor WB and
HF generator LG 2002 T

WR 4-1503.01

Rohrreaktor SONOBLOC®

- intensive treatment of fibrous and bandshaped products
- Support of industrial and biotechnological processes
- Wire cleaning
- Degassing
- Disrupting of bacteria
- Acceleration of disintegration
- Dispersing of solid particles in liquids

Tube reactor SONOBLIOC®
consisting of:
Tube reactorbloc RB and
HF generator LG 1001 T

SONOREX TECHNIK industrial ultrasonic units

RM 110 UH

SONOREX TECHNIK modular programme RM is available in 6 standard sizes with 4 versions for cleaning as well as for rinsing. Once the cleaning process is defined, the units can be matched individually:

RM ... UH cleaning unit with ultrasound and heating
RM ... H rinsing unit with heating
RM ... U cleaning unit with ultrasound
RM ... rinsing unit without ultrasound and heating

Frequency 40 kHz, starting with RM 110 UH alternatively 25 kHz. RM 16 UH to 75 UH, 230 V~, 50/60 Hz, RM 110 UH to 210 UH, 380 to 415 V, 3-phase current~, N, PE, 50/60 Hz, 16 A. Heating 30 to 80 °C (86 to 176 °F). Welded tank, 2 mm stainless steel AISI 316 Ti. Overflow, welded one-piece drain, drip-proof stainless steel housing and a sprinkle tube (from RM 110 UH upwards).
